Method: the rev 3 table cells were split item-by-item (259 items) and each item was given one code in table order; the build fails if any space has a missing or extra item.
Room-wide finishes (floors, wall finishes, panel systems, materials) carry a square badge placed in the room; every other item is placed at its position on the plan.
Not from the table (drawn hatched grey for context only): lift car and the existing vestibule wardrobe from the client plan.
